

OTHER SPA SERVICES

Eyelash Extensions

Give you longer, thicker, safe, natural looking eyelashes and most of all GLAMOROUS LOOKS!!!

The lashes are applied individually directly on your natural lashes without direct skin contact. "Misencil" eyelashes are soft, comfortable and waterproof.

Misencil glue has been developed in laboratory specifically for the application of eyelash extensions. Because it is permanent, it will adhere to the natural lashes until the latter fall out naturally.

Eyelash and Eyebrow Tinting

Using natural vegetable dye, safe around eyes, makes brows/lashes dark, silky and smooth. Choice of colours will complement your hair colour.

Waxing *(full face, back, arms, legs and bikini)*

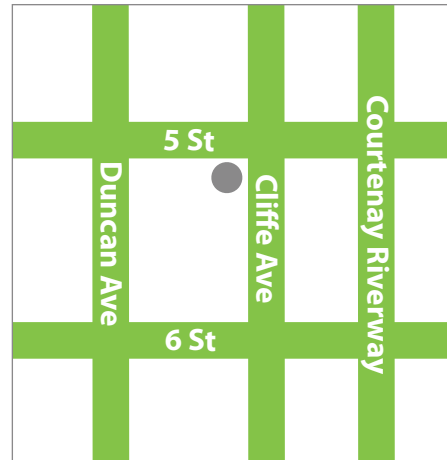

Hard or hot wax is applied thicker than soft wax and removed without strips. Unlike soft wax, hard wax does not stick to the skin, which makes it less irritating. For face, underarms, bikini and brazilian.

Soft or warm wax is applied thin and removed with strips. The recommended use for the wax is arms, legs, back and chest.

APPOINTMENTS & CANCELLATIONS

Please arrive 15 minutes prior to your appointment to prepare for your services. Cancellations require 24 hrs notice.

SKIN CARE TREATMENTS

Signature Facial Treatment

Customized for your skin type and concerns. Includes: cleansing, exfoliation, skin analysis, steaming, extraction (if needed), mask, penetration of active ingredients and hydration. Eye treatment can be added to help alleviate excessive puffiness, dark circles and dryness.

Microdermabrasion (facial included)

This progressive, non-invasive treatment removes dead surface cells, reduces sun damage, pore size, fine lines, acne scars and age spots. It promotes new collagen and skin cell growth, resulting in clean, fresh and smooth skin tone. *(Series of 6 treatments with 4 to 6 weeks intervals recommended).*

Chemical Peels (post-treatment kit needed)

Treatments designed to remove dead surface cells with nontoxic, natural, hydroquinone free solutions. Blends of alpha and beta hydroxy acids and other ingredients are used to treat clogged pores, active acne, to reduce fine lines, wrinkles and scarring, to lighten hyperpigmentation and improve appearance of mature, aging and sun damaged skin. *(Series of 6 treatments with 2 to 6 weeks intervals depending on skin type recommended).*

Peel Alternatives (no kit needed after treatment)

Treatments designed for detoxification, oxygenation and anti-aging to reduce inflammation, promote healing and improve circulation. The skin is infused with vitamins such as A & C and antioxidants.

Minor Skin Irregularities Treatments/Removals

Skin tags, cholesterol deposits, milia, cherry angiomas (blood spots), telangiectasia (broken capillaries) are treated with a probe using a radio frequency current that cauterizes and eliminates fluid in the epidermis. This enables an effective and non-invasive removal of these minor skin irregularities without penetration of the skin surface.

PERMANENT MAKEUP

Smudgeproof – Smearproof - Waterproof

It is also known as micropigmentation or cosmetic tattooing. Great way to enhance and correct features and eliminate the need for daily makeup routine. Microinsertion of iron-oxide mineral pigments into the dermis with specially designed, state of the art instruments.

Eyebrows

Blending and feathering techniques. Enhances the natural features of the eyebrows. Exceptional in replacing eyebrows that have lost their fullness due to age and hair loss.

Eyeliner

Refines the lashes and contours the eye. Natural, softer look to a dramatic look. Makes lashes look fuller.

Lips – full lips or liner only

Accentuates the lips by creating more defined shape. Soft or intense shading. Minimizes the appearance of fine lines.

Colour and Shape Corrections

Corrects faded or undesired skin colour and shape.

PARAMEDICAL PROCEDURES

Paramedical use of permanent makeup provides a finishing touch to surgical procedures, camouflaging scars and skin disorders and burns. Paramedical permanent makeup is the implantation of customized pigment within the skin in a safe and sterile environment by a highly trained, certified and experienced technician. This procedure has to be done in multiple sessions or until the desired appearance is achieved. Patch test is necessary.

Scar Camouflaging

Corrective Pigment Camouflage “CPC”
This procedure restores color to visible scars due to surgeries, burns, accidents and medical conditions such as vitiligo, alopecia & thyroid. Customized skin coloured pigments are infused into the scar to enhance its appearance. For best results, the scars are at least one year old, paler than the surrounding skin, not raised or sunken and have a smooth texture.

Areola Restoration and Nipple Repigmentation

Is a safe method of enhancing the appearance of the breast. The procedure is beneficial:

- as a final phase of breast reconstruction
- to conceal surgical scarring after breast uplift and breast reduction
- for men and women who want to improve the appearance of their areola
- that have uneven color, too pale, without definition or too small

Skin Needling/Dry Needling

An alternative to Botox and other fillers. It is a technique used in collagen stimulation for facial wrinkles, removing scars caused by acne and softening crow’s feet. It is a unique process that plumps up the skin’s NATURAL collagen in depressed areas. More blood vessels and healthy skin are left intact, promoting healing and collagen deposit for better long term results. Because skin needling/dry needling does not destruct whole layers of the epidermis, this treatment can be done frequently, unlike the other methods. Three (3) treatments are recommended, 2 consecutive treatments in 4 weeks and the 3rd after 4 months.
